

Amendments to the Specification:

Page 7:

Please replace the paragraph on page 7, lines 21 through 29 with the following:

The damping elements ~~[[22]]~~ may be realized in the form of solid dampers or hollow dampers 22, as shown in Figures 5-7. Adjustments of the damping constant ~~[[32]]~~ can be carried out similar to those of the spring elements 20, wherein the damping constant can be adjusted by means of an axial prestress via threaded adjusting element 23 in solid dampers and hollow dampers 22 or by means of rotatable eccentric rings ~~[[48]]~~ arranged in hollow dampers. When utilizing vibration-reducing elements 18 in the form of hollow dampers 22, it is, according to the invention, also possible to fill the hollow damper 22 with compressed air or fluid such that an adjustment of the damping element 22 can also be achieved in this fashion.
